

Mobile Learn Release - April 2014

Building Block Name: Blackboard Mobile Web Services

Latest Version: 4.5

Date Released: April 30, 2014

Minimum Learn Version

All Blackboard Learn 9.1 Releases

Resolved Issues

- Enabled test attempts within the Mobile apps to respect IP filtering restrictions.
- Fixed an issue causing HTML headings to be broken on iOS devices.
- Fixed a Java error when loading the quickLinks page.
- Fixed an issue that prevented Mobile logins from being tracked correctly.
- Fixed an error relating to discussion threads API call.
- Fixed issues that caused new blog entries, journal entries, announcements, and content items to not return successfully.
- Fixed an issue that caused native login attempts to fail on Learn 9.1 April 2014.

Default State

Enabled

Disabling and Removing the Building Block

Users will be able to find the Learn instance in the Mobile Learn App school picker, but will be unable to login.

Roles

Once the B2 is enabled, any user with credentials on the Learn instance will be able to login through the Mobile Learn App.

To learn more, see [Roles and Privileges](#).

Dependencies

Mobile Learn requires installing the following Building Blocks:

- Assessments
- Assignments
- Grading
- Discussion Board
- Blogs and Journals
- Group Management
- My Grades
- Task Progress

To Learn More

To learn more, see [Mobile Learn](#) help.
