

Mobile Learn Update - October 2014

Building Block Name: Mobile Learn Building Block

Latest Version: 94.6.0

Date Released: October 2014

Minimum Learn Version

Blackboard Learn 9.1 Service Pack (SP) 13 and later

New Features

Provides support for the Bb Grader mobile application. By installing this version, users will be able to find their school and login to Bb Grader using the same credentials they use for Web Learn and Mobile Learn.

Default State

On a fresh install of Learn, the Mobile Learn Building Block is inactive by default, and will need to be activated and registered with the Mobile Learn Central Service, which can be completed from within the Building Block.

For Learn instances that already have an older version of the Mobile Learn Building Block, updating to the latest version will retain the same state as the previous version. If the previous version was active and registered, the new version will retain the registration without any additional action on the administrator's part.

Disabling and Removing the Building Block

If the administrator disables or removes the Building Block, users will not be able to locate their Learn instance when using the Mobile Learn or Bb Grader school picker. The administrator must re-enable, or re-install the Building Block.

Roles

- Administrators install the building block and register the institution.
- Instructors use the app to review and grade student submissions.

To learn more, see [Roles and Privileges](#).

Dependencies

Mobile Learn requires installing the following Building Blocks:

- Assessments
- Assignments
- Grading
- Discussion Board
- Blogs and Journals
- Group Management
- My Grades
- Task Progress

The Mobile Learn Building Block must be registered with the Mobile Learn Central Service, which can be completed from within the Building Block.
