Collaborate Ultra Resolved Issues - Oct 2015

The following issues from the previous known issues have been resolved.

Resolved Issue	Status
----------------	--------

Accessibility Related

Hosting an application share is not currently supported for JAWS in Blackboard Collaborate. Google's Desktop sharing extension is not accessible. If you are using a screen reader, you can share files and a blank whiteboard with your participants. You cannot easily share an application.

Closed - Pending Google Fix Audio and Video Related 6 audio streams can now be maintained with less chance of missed audio.

Resolved Display Related Border lines are missing between participants in the Participants panel.

Fixed User profile picture is covered with the time details on the chat notification.

Fixed The active speaker is not properly displayed for users in IE, Safari and Firefox when they are in low bandwidth mode.

Fixed Flash[®] Related Flash-based users were sounding much louder than Chrome[™] user. The volume setting for flash-based browsers should default to 75%.

Closed Internet Explorer (IE)[®] Related Users with IE browsers do not see their personal participant details when in a session alone and sharing video.

Fixed Recordings are corrupted for some Mac/Window users when application sharing or the whiteboard are shown in the recording. To learn more, see [the article on Behind the Blackboard](#) (available in English only). Closed - Pending an Adobe Fix Session Administration System (SAS) Related When sessions have a defined number of reserved seats, additional participants, over the reserved seat number, can still join.

Closed - Fix Not Planned Moderators can create sessions that overlap.

Closed - Fix Not Planned
